<sup>2</sup>Peer Review, Publications Department, Optica, 2010 Massachusetts Avenue NW, Washington, DC 20036, USA

<sup>3</sup>Currently with the Meetings Department, Optica, 2010 Massachusetts Avenue NW, Washington, DC 20036, USA

\*cstech@optica.org

**Abstract:** L<sup>A</sup>T<sub>E</sub>X users preparing manuscripts for Optica meetings or conferences should use the `opticameet3.sty` style file and should observe these guidelines to adhere to Optica requirements. Users of Bib<sub>T</sub>E<sub>X</sub> may use the `opticajnl.bst` style file, which is included in this distribution. Comments and questions should be directed to the Optica Conference Papers staff (cstech@optica.org).

## 1. Main Text

### 1.1. Required Elements

All PDF submissions must contain the following items in order to be published:

1. Complete title
2. Complete listing of all authors and their affiliations
3. Self-contained 35-word abstract (indexers such as Google Scholar will not index papers that do not contain abstracts)
4. Do not include a copyright statement following the abstract. Optica will add the copyright statement to the footer in the PDF file, e.g., This Article ©2025 The Author(s).
5. Permission and attribution for any trademarked or copyright images. Note that images of people or images owned or trademarked by other entities (including well-known logo's or cartoon characters for example) will also require official written permission.
6. Please include consecutive callouts to figures, equations, tables, and references in the text
7. Two-page limit unless designated otherwise on conference website

### 1.2. Typographical Style

Margins and type size will be set by the Optica L<sup>A</sup>T<sub>E</sub>X commands for title, author names and addresses, abstract, references, captions, and so on. The `opticameet3.sty` package references `mathptmx.sty` for Times text and math fonts. Authors who require Computer Modern font may modify the style file or, preferably, invoke the package `ae.sty` or similar for optimum output with Computer Modern.

### 1.3. Author Names and Affiliations

Author names should be given in full with first initials spelled out to assist with indexing. Affiliations should follow the format division, organization, and address—and complete postal information should be given. Abbreviations should not be used. United States addresses should end with “, USA.”

### 1.4. Abstract

The abstract should be limited to no more than 35 words. It should be an explicit summary of the paper that states the problem, the methods used, and the major results and conclusions. If another publication author is referenced in the abstract, abbreviated information (e.g., journal, volume number, first page, year) must be given in the abstract itself, without a reference number. (The item referenced in the abstract should be the first cited reference in the body.)

## 1.5. Notation

### 1.5.1. General Notation

Notation must be legible, clear, compact, and consistent with standard usage. In general, acronyms should be defined at first use.

### 1.5.2. Math Notation

Equations should use standard L<sup>A</sup>T<sub>E</sub>X or AMSL<sup>A</sup>T<sub>E</sub>X commands (sample from Krishnan *et al.* [1]).

$$\begin{aligned}\bar{\varepsilon} &= \frac{\int_0^{\infty} \varepsilon \exp(-\beta \varepsilon) d\varepsilon}{\int_0^{\infty} \exp(-\beta \varepsilon) d\varepsilon} \\ &= -\frac{d}{d\beta} \log \left[ \int_0^{\infty} \exp(-\beta \varepsilon) d\varepsilon \right] = \frac{1}{\beta} = kT.\end{aligned}\tag{1}$$

## 2. Tables and Figures

Figures and illustrations should be incorporated directly into the manuscript, and the size of a figure should be commensurate with the amount and value of the information conveyed by the figure.

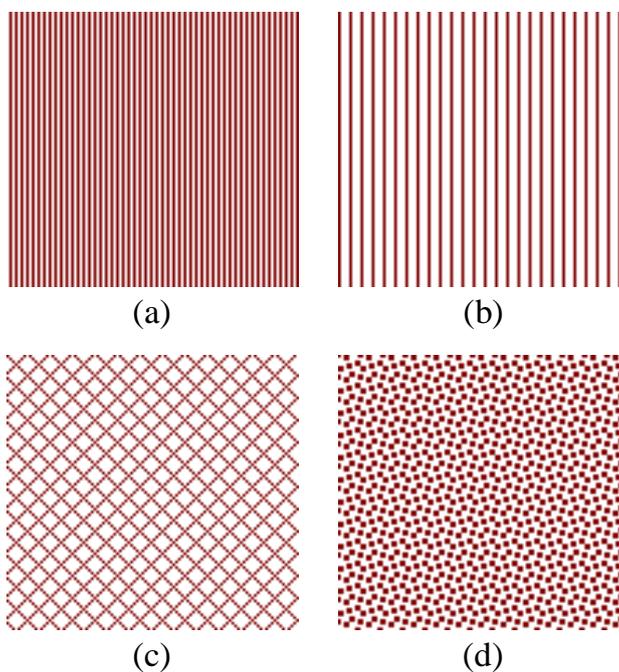

Fig. 1. Sample figure with preferred style for labeling parts.

Table 1. Sample Table

One	Two	Three
Eins	Zwei	Drei
Un	Deux	Trois
Jeden	Dvě	Tři

No more than three figures should generally be included in the paper. Place figures as close as possible to where they are mentioned in the text. No part of a figure should extend beyond text width, and text should not wrap around figures. Please provide permission and attribution for any trademarked or copyright images. To meet accessibility requirements, do not rely solely on color to identify figure elements (such as blue and red curves). Instead, use shapes or other features along with color. For example, you can use dashed and dotted lines, different shapes for data points, text labels pointing to the color features, numbering, etc.

### 3. References

References should be cited with the `\cite{}` command. Bracketed citation style, as opposed to superscript, is preferred [1–7]. The `opticameet3.sty` style file references `cite.sty`. Comprehensive journal abbreviations are available on the Crossref web site: <http://www.crossref.org/titleList/>.
