## Chapter 1

# Minimal Example

The simplest report you can write is:

```
\documentclass{sintefreport}  
\title{My Report}  
\begin{document}  
\frontmatter  
Hello world!  
\backmatter  
\end{document}
```

Use `\frontmatter` to set up the front page, history page and table of contents, and `\backmatter` to set up the back cover.

To set the cover picture, use the command `\coverbackground`. If you do not specify it, the cover background will be rendered as a uniform `sintefgrey`.

## Chapter 2

# Class Options

This class takes some special options for classification: `unrestrictedsummary`, `restrictedsummary` and `confidentialsummary` determine the classification of the summary page (page 1).

Fields can be set with several commands. All relevant fields default to a “Set with `\command`” description, so, to know which command to use to set a certain field, just compile a the empty file and look at the resulting PDF.

If you set the `print` option, in addition to changing all colours and logos to CMYK as in `sintefdoc`, the class will add a separate white page after the cover.

This class inherits from `sintefdoc`, so everything mentioned in that class’ documentation is valid here as well.

In particular, this class passes the `report` option to `sintefdoc`. If you prefer the old style inherited from `article`, or want to compile some old reports without bumping all sections one level up, you can predictably pass the `article` class option.
